Inclination sensors • Inclination sensors

Inclination sensor, 58x64x36mm, -10...+10°, 9-30V DC, -25-80°C, 2 axes X+Y, 2x 4-20mA, M12 connector 5pin, aluminum, IP67

LED display angle display 4 crosshair LEDs

Inclination sensors are used for absolute angle and position detection and measure the angle of an object in relation to the earth's gravity. The range of applications is diverse: e.g. on excavators, cranes and lifting platforms (accident protection), on wind turbines, telescopes or industrial robots, to name just a few examples. The integration of inclination sensors in a wide variety of applications is unproblematic, as no complex installations are required. Our sensors work according to the conductometric measuring principle and ensure high accuracy even with small angle changes.
